

ABSTRACT OF THE DISCLOSURE

A file creation method creates a program-addition file for adding a program to a program-initiation recording medium of an information processing apparatus. The file creation method  
5 comprises the steps of acquiring identification information of the program-initiation recording medium, and creating a program-addition file in response to the identification information so that starting of the program on the information processing apparatus is allowed by the program-addition file with the program stored in the  
10 program-initiation recording medium.
